

## RX28A-17 Reflex Racing RX28 KISS Front End

### Included parts:

- Lower Arm Bar
- 2x Upper King Pin and 2x Lower King Pin
- 2x Centered upper arm insert 2x Offset
- 2x Upper Arm Towers (L&R)
- 2x Medium Springs
- 2x Delrin Spring Perch
- 4x Delrin Pivot Balls
- 4x M2x4 Button Head Screws, 2x M2x0.25mm shims, 3x M2x4 CS Screws

### Directions:

1. We recommend polishing the kingpins with something like Mother's before install.

2. Install grooved kingpins on top and shorter ones on the bottom of the knuckles (not included).

3. Install the symmetric silver eccentrics on the lower arm bar (this will give 1.5\* of camber. When using the offset ones, one side gives you 1\* and the other gives you 2\*). Then install the kingpins in the lower pivot balls. Use a gold shim under each knuckle. Slide the Spring Perch so that they sit on top of the knuckle. Then install the springs on top.

4. Install the upper arm towers on each side. If they are slid all the way forward, you will have 2\* of caster. All the way back, 4\*

\*mind the spring perch gap with the bearing seat on the wheel. A 0.25-0.50mm shim can help if the wheels are rubbing.
